

- New and refurbished cooling & heating coils
- Increased process capabilities
- Advanced pressure & vacuum systems
- Retrofits and upgrades
- Turn-key installation

Cooling Systems

ASC can provide new closed-loop cooling systems for your thermal process equipment. Our cooling systems incorporate ASC-designed and manufactured stainless steel heat exchangers, custom-built storage tanks, and high-quality motors and pumps.

Heat Exchangers

ASC manufactures heat exchangers for autoclaves, hydraulic forming presses, and other processes and equipment. ASC can fabricate heat exchangers for your existing equipment, saving you the costly expense of original brand manufacture. If your process demands more cooling capacity, or tighter control, ASC can retrofit your equipment to meet your needs.

Vacuum Systems

ASC designed and manufactured vacuum systems are used in dozens of manufacturing and processing plants throughout the world. In fact ASC vacuum systems have become the de facto standard at some of the worlds largest aerospace concerns. Why? ASC systems utilize off-the-shelf components for easy maintenance, all-stainless steel construction, and the highest quality fittings.

Heating Systems

ASC can manufacture custom-designed heating systems for your new or existing thermal process equipment. ASC can provide an electrical, combustion, or hot oil / water solution to your particular application.

Pressurization Systems

ASC can manufacture custom-designed pressure supply and control systems for your equipment. ASC specializes in high-pressure applications, and can design a cost-effective system to boost your existing process capabilities. LN₂, GN₂, CO₂ supplies are no problem.

Advanced Controls

The finishing touch on any auxiliary system is controls. ASC Controls Division are experts at providing the most effective control approach to your auxiliary system.
